At an early stage of a project , Berkin would have received a concept in molding from client and engineer the best way out of the concept in terms of architectural incorporation , outlook , animated programming , environmental issues , installation and maintenance considerations.

Our professional sales engineer will select a suitable fixtures from our wide range of products from qualified factories . Making sure the fixtures itself applicable for that specific project and architecture. It might involve certain R&D to develop new technology incorporation and customization either in system design or the fixture itself .

## CLIENT CONCEPTUAL REQUIREMENTS

We will be able to provide many pre- project support such as lux level calculation to fulfil environmental or technique requirement of that certain project.

Simulation can be also provided for client and all different parties to visualize the final effect on a building. This is important for all parties involve such as the client or architect for a better understanding and therefore more clear instruction can be given to all other construction team on site.
