

# O&M MANUAL & SUPPORT DOCUMENT

A sample of utilizing graphics to present progress and installation work

Site progress in different area and the time schedules

O&M manual and other related document, including as built drawing, cable routing diagram will be provided which detailly shows how the system is to be operated and lighting fixtures are to be maintained. In additional, the entire system design would be documented in the O&M manual such that it could be upgraded and modified in accordance with the future development

# O&M MANUEL & SUPPORT DOCUMENT

## Maintenance Team:

It is a long term operation during the entire life cycle of the lighting system. A typical start would be shortly after the start of Defect Liability Period. During this DLP, we would update and upgrade the information in the O&M manual such that the system information would be not phased out.

## Operation Team:

The daily operation and operation during special days are the main concerned. A full training session would be conducted during the system handovers to end users. The degree of training is to get the operation team to be familiar with the lighting system and to fine tune the lighting system in order to cater for their needs. A hotline is available and in some system it might come with a remote feature such that an operator, with the hotline assistance, would be operating the system in no time.
